

Steps to use markforged

1. Export from fusion360 what you want to be printed in an **STL file**
 - a. Email it to yourself
2. Login to makerspace desktop computer
3. Use an online program called eiger.io
 - a. Ask Josh to login if not already logged in
4. Import into eiger.io the stl file
5. Position object by clicking on it
 - a. It helps to have threads on z axis
6. Material is onyx
 - a. No reinforcement necessary unless object is a wonky shape
7. Export Build
8. Put that file onto flash drive
9. Stick flash drive into printer
10. Hit print from storage
11. Make sure it runs a purge line (if necessary)
12. Make sure print first layer correctly
 - a. Filament is expensive, do not want to waste

Other Notes

1. Run out? Ask Josh to order
2. Replace Filament/Service printer follow instructions on printer itself
